CPR Commission:

As a means for keeping California competitive as a national leader in advanced transportation technologies, the ATT Initiative was established to transform the workforce in the rapidly developing, technology-driven transportation industry while improving the environment and stimulating the economy.

The ATT Centers train technicians to meet the challenges of tomorrow's imminent transportation technologies. There are ten centers, strategically located throughout the state, which provide training in the areas of alternative fuels, alternative fueled vehicles, intelligent transportation systems, wireless communication and many other newly emerging technologies.

Through the leadership, guidance and coordination of the ATT Initiative, employer's needs are assessed and meaningful training programs are developed. The results are consistent, replicable curriculum, services, and programs tailored to the needs of each region and employer in California.

Thank you for acknowledging the work of the California Community College Economic and Workforce Development Program. (Chapter 3 of the California Performance Review, "Education, Training and Volunteerism," Section 26 - Expand Training Partnerships with Private Industry.) In order to continue to be effective, we must maintain the support of the Governor and legislature to be a stable program, funded appropriately. We are prepared to continue to assist in California's economic recovery. We are the ready, proven delivery system in the State.

Sincerely yours,

David Esmaili, Director  
West Valley College Center for  
Advanced Transportation Technologies
